Basic earnings per share (RMB cents)	11.7	9.0	30.0%
Final dividend per share (HK cents)	1.0	-	-

[30 March 2010, Hong Kong] China All Access (Holdings) Limited (“China All Access” or the “Company”, HKEx Stock Code: 633), an integrated information communication application solution provider and application service provider in the PRC, announces its annual results for the year ended 31 December 2009 (the “year under review”).

Driven by the impressive sales performance of wireless data and satellite communication application solutions and services, the Group’s revenue increased by 73.4% to RMB324.3 million for the year ended 31 December 2009. Gross profit increased from RMB83.0 million in 2008 to RMB143.9 million in 2009, representing a growth of 77.6%. Profit for the year increased by 44.4% to RMB97.9 million when compared to that of 2008. The gross profit margin remained at a stable level of 44.4% in 2009. Basic earnings per share was RMB 11.7 cents (2008: RMB 9.0 cents). The Board of Directors recommends the payment of a final dividend of HK\$1.0 cents per share for the year ended 31 December 2009.

Mr. Shao Kwok Keung, Chief Executive Officer and Executive Director of China All Access said, “2009 is a milestone year for the Company as we were successfully listed on The Stock Exchange of Hong Kong Ltd. The successful listing has given us a solid platform to realize our vision which is to become a leading provider for application solutions for public safety, city integrated management and city emergency communication in the PRC. Being a pioneer in the provision of advanced communication technology to facilitate the emergency operations, disaster recovery and public administration, our customized application solutions have been rolled out to a large footprint of areas in the PRC. In 2009, we also entered

~ con’t ~

into several new industries, including telecommunication operator, public health and hygiene, etc. In summary, our growth was achieved in three dimensions, namely geographical expansion to cover more provinces, penetration into industries in which we have a foothold with projects launched by us and entering into new industries.”

With the increasing demand for wireless data application solutions and services which was propelled by the launch of 3G mobile communication services in the PRC, the Group has recorded remarkable growth in wireless data communication application solutions and services. The revenue from the provision of wireless data communication application solutions and services increased by 166% to RMB166.86 million, representing approximately 52% of the Group's total revenue. Its convenience in usage and its user-friendliness in integrating with different operating systems enable the Group to provide more projects to customers in different industries including traffic law enforcement bureau, fire service bureau, bank, telecommunication operating company, mining industry and utility company.

The provision of satellite communication application solutions and services exhibited an increase in revenue from RMB120.07 million in 2008 to RMB153.16 million in 2009, representing a growth of 28%. The growth was mainly driven by the sales of more satellite communication solutions with increasing market penetration in industries engaged and new industries. With the provision of advanced technologies to the market, the Group has solicited the interest of more prospective customers in different industries. In 2009, the revenue from the provision of satellite communication application solutions and services accounted for about 47% of the Group's total revenue. Besides the geographical expansion of market to cover more customers of the same industries in different provinces and the repeated orders from existing customers, the Group also developed customers in several new industries, including the public health and hygiene industry and the telecommunication operators.

The call centre application solutions and services remained as a very stable business segment. In 2009, it represented about 1% of the Group's total revenue. The Group's call centre application solutions and services are customized packages for the telecommunication, banking and broadcasting enterprises which have outsourced their call centres to call centre service providers. The Group will approach more call centre service providers in the market to develop partnership relationships with them in order to grow this business.

Looking forward, it is estimated that the increasing popularity of 3G in the PRC market will further raise up the demand of wireless data communication application solutions and services, and provide enormous business opportunities to the Group. Besides, the continuous rapid economic development in the PRC will boost the awareness of having alternative means of communication technologies, which have demonstrated effectiveness in the event of emergency situation and safeguarding the accomplishment of mission critical activities. It is believed that more and more institutions of different sectors will invest into this sector.

Mr. Shao concluded, "The Group has positioned itself to pursue the leading role application solution provider for public safety, city integrated management and city emergency communication in the PRC. The Group will set up national sales and marketing network and develop offices in the capital cities of all coastal provinces and some inland provinces to replicate sales models across the nation. The Group will not only continue to increase market share in the industries which it has strong foothold, but will also enter into new industries to maximize the value of its applications and services. Moreover, the Group will endeavor to pursue more advanced technology to differentiate itself from other vendors and to launch new products which will provide new applications. We will continue to seize the tremendous business opportunities and strive to maximize shareholders' returns."

~ end ~

About China All Access

China All Access is engaged in providing application solutions and application services for public safety, city emergency communication and city integrated management purposes for governmental departments or agencies, public utilities institutions and business enterprises. The core module of the Company's integration application platform is called "ALL ACCESS platform". It acts as a centralized data processing unit, where data received through connections from different application solutions are processed and transmitted in different mode depending on the users' different needs. The Group's application solutions are mainly divided into three categories: satellite communication application solutions, wireless data communication application solutions and call centre application solutions. In addition, the Group also sells and distributes terminal equipment.
