

China All Access Creates a Professional Brand by Extensive Applications of its Products in Emergency Communication and City Integrated Management Markets

High-speed Developing Wireless Data Communication Application Business

With the increasing popularity of wireless data communication application solutions in domestic communication market, the Group has developed three major wireless data communication application solutions to fulfill the needs of city integrated management. These products are well received by industries such as safe production monitoring, transportation management, public utilities and varieties of enterprises that need to collect and transmit data from remote distance.

Safe Production Monitoring System Becomes New Growth Driver of Revenue

Safety production monitoring system provides mining environment surveillance and controlling services for coal mining institutes, and provides remote safe operation surveillance and controlling services of communication network and facilities for mobile operators. The extensive applications of products have effectively reduced costs of enterprises operation and other comprehensive costs, which received overwhelming response from clients, and thereby attracted more users.

Traffic Management Products Qualified as the Industry Standard

Following its success in the application of Traffic Offence Electronic Ticketing and Payment Solution System in the traffic management department across Hebei province, this application software has been well recognized by national research and

development institutes for its easy accessible functions with scientific, standardized, comprehensive and applicability characters. It has also be granted a tender for “Traffic Police Dedicated Mobile Enforcement Platform Software Commission Development” (“交警专用移动执法平台软件委托开发”) Project by National Ministry of Public Security Traffic Administration Scientific Research Institute (“国家公安部交通管理科学研究所”). In view of this, this solution is expected to be an important part of industry standard nationwide.

Various Products of Satellite Communication Application Brings Great Impact on Emergency Communication

The Group’s various satellite communication application products have fulfilled clients’ needs for emergency safety protection across China. In a pipeline explosion incident in Dalian on night of 16 July, Qinhuangdao Fire Corps and Langfang Fire Brigade adopted the Company’s Dynamic Satellite Command Vehicle and Stationary Fire Communication Satellites Command Vehicle respectively in the operations of fire fighting. The vehicles collected real-time visual and audio data immediately under commander’s orders, and then transmitted the real-time data to the command center of public security department. This first-hand information helped frontline commanders make the best decision during the operation, demonstrating its significant importance in the fire fighting.
